

Roller Spindle Fitting Instructions For Garador Side Extension

All work to be carried out from **inside the garage**. Ensure that all tools required are at hand. You may require assistance.

1. Prop the door securely in the open position
2. Remove white plastic channels covering the spring assemblies
3. Carefully unhook the bottom of the springs from their track anchor points
4. Carefully support the door panel, remove prop and bring the door down to its closed position (two people may be required)
5. Place wedges between door and frame to hold it in position
6. Working upwards from the bottom of the track, remove sufficient track fixing screws to enable track to be moved sideways and give access to the roller spindle
7. Unhook cable from roller spindle and using adjustable grips, clamp the cable to side track
8. Remove spindle retaining C clips and slide old roller spindle from its housing
9. Fix new roller spindles into housing and retain with C clips, place cable loop onto their appropriate anchor positions on the roller spindles
10. Re-fix tracks into original position, raise door to open position, prop in place and secure bottom of springs to their relevant anchor points. Close door and re-fix white plastic channels in place

SAFETY NOTE

Safety glasses and gloves should be worn at all times. If in doubt, this work should be carried out by an experienced installer.

All work is undertaken at your own risk.
